

Kristian Vengsgaard is CIO of Danish Defense. His carrier in IT has been focused on development and new technology – always form a business orientated angle. Kristian have had positions as head of architecture, program director, senior vice president of IT development etc. and have run some of the biggest and most complicated it-projects in the Danish public sector. He have also had break from the public sector, while working as a management consultant (partner). Focus was it-strategy level including digitization, sourcing, organization, governance, business technology and digital leadership. With the position in Danish Defense comes the responsibility of a large in sourced production team and installation, massive classified systems and the turnaround of the it organization from a reactive inward thinking production unit to a proactive costumer focused DevOp team while delivering projects and significant cost reductions.
