

David Arsenault is an Associate Department Head at The MITRE Corporation. David's work is focused on bringing advanced technologies and agile engineering techniques to bear on hard national security problems such as countering IEDs, managing and mining intelligence data, building new analytical capabilities, and helping bring Web 2.0 technologies and ideas into government. He has worked on the intelligence community wiki, Intellipedia, and has contributed to several other operational systems leveraging social software. Prior to MITRE, David held various positions with America Online (AOL) and worked with Netscape on various e-commerce, search, and community projects. David is also a member of the WC3 Web Applications Working Group working to improve client-side web application development. In addition to his work at MITRE, David is also an intelligence officer in the Navy currently working on counterterrorism issues for AFRICOM and CENTCOM. David holds a B.S. in Finance/Economics from Central Connecticut State University and a M.S. in Computer Science from George Mason University.
