

**Dr. Scott C. Truver** is Executive Advisor, National Security Programs, at Gryphon Technologies LC, specializing in national and homeland security, and naval and maritime strategies, doctrines, programs and operations. Since 1972, Dr. Truver has participated in many studies and assessments for government and private industry in the United States and abroad, and has also written extensively for U.S. and foreign publications. He is the author, co-author or editor of numerous papers and reports, several hundred articles, and four books. He assisted in the development of numerous Navy-Marine Corps strategy papers (beginning with ...*From the Sea* in 1992), policy documents and reports; he supported the interagency task force drafting the U.S. President's National Strategy for Maritime Security (2005); and he has done extensive work with the U.S. Coast Guard in strategic planning and communications efforts related to Maritime Domain Awareness, the National Fleet Policy, and future capabilities requirements. In addition, he has lectured at the U.S. Naval Academy, Naval War College, Naval Postgraduate School, U.S. Merchant Marine Academy, Headquarters Norwegian Navy, EGUERMIN Mine Warfare School, and the Heritage Foundation, among other venues. He holds a Doctor of Philosophy degree in Marine Policy Studies (1978)—the first Ph.D. in this field ever awarded by an institution of higher education—and a Master of Arts degree in Political Science/International Relations (1974) from the University of Delaware. He also holds a Bachelor of Arts degree in Political Science from Susquehanna University (1972), and is a 1968 graduate of Forrest Sherman High School, Naples, Italy.

*Inc.* Magazine has ranked **Gryphon Technologies LC** as one of “America’s Top Growing Private Companies.” With its headquarters in Greenbelt, Maryland, and offices throughout the United States, Gryphon Technologies’ record of success in delivering **engineering, logistics, management** and **information technology** services has resulted in a decade of continuous growth and customer satisfaction. Committed to serving national security interests, Gryphon Technologies designs, integrates, maintains and upgrades complex, state-of-the-art systems for the Department of Defense, and provides customers in government and industry with systems integration and program management services for a broad range of mission-critical systems. Gryphon’s **National Security Program** focuses on international security, foreign policy, national security, homeland security and defense, and aerospace, naval and maritime warfare requirements, capabilities, plans, programs and operations in several key areas: planning, analysis, and evaluation; doctrinal and operational concept articulation; program development, implementation and assessment; and strategic communications, outreach and program advocacy.
