Dr. D'Arcangelo is a Technical Staff member in the Homeland Protection Systems Group at MIT Lincoln Laboratory. Her work in the group has focused on systems analysis and architecture development in a range of areas, such as chemical and biological threat defense, border security, air surveillance, and maritime surveillance. In recent years, she has explored the topic of countering new and novel threats posed by the proliferation of unmanned vehicles, supporting sponsors in both the Department of Homeland Security and the Department of Defense.  She received a BA in Astrophysics from Wellesley College, and an MA and PhD in Astronomy from Boston University.
