

CompTIA Learning Solutions at TechNet Cyber

Practical AI Security: Unique skills and best practices

June 25-27, 2024 * Baltimore Convention Center

Baltimore, MD

Moderator: Dr. James Stanger, Chief Technology Evangelist, CompTIA
CEUs Available

Let's get past the theory and cut to the chase about securing AI platforms. For this 3-hour learning session, we have gathered a group of working AI and data professionals. Together, we'll discuss the subtle nuances and unique best practices involved when protecting AI and the data that feeds it. Our professionals look forward to telling you about their worlds and answering your questions. If you're interested in getting answers to questions such as "How is protecting AI any different than protecting any other asset?" and "How do we protect the data that we use to feed AI?" and "How do we best work with our AI co-workers?" then we welcome you to join in the fun. We'll also discuss AI-adjacent job roles and how individuals can upskill themselves to secure AI.

In addition, if you have questions about the newly released 8140 and how it affects you or your employees, CompTIA staff will help answer as many questions as possible around training and certifications. **CompTIA has current approval for 3 of our certifications across 26 work roles under DoD D8140.03M with more to come.** Let us help you navigate the information so you and your team can remain qualified under the 8140 program.
