

AMERICA'S ARMY

THE STRENGTH OF THE NATION

Mission Command Network Modernization

AFCEA
3 April 2018

MG Mingus & MG Morrison

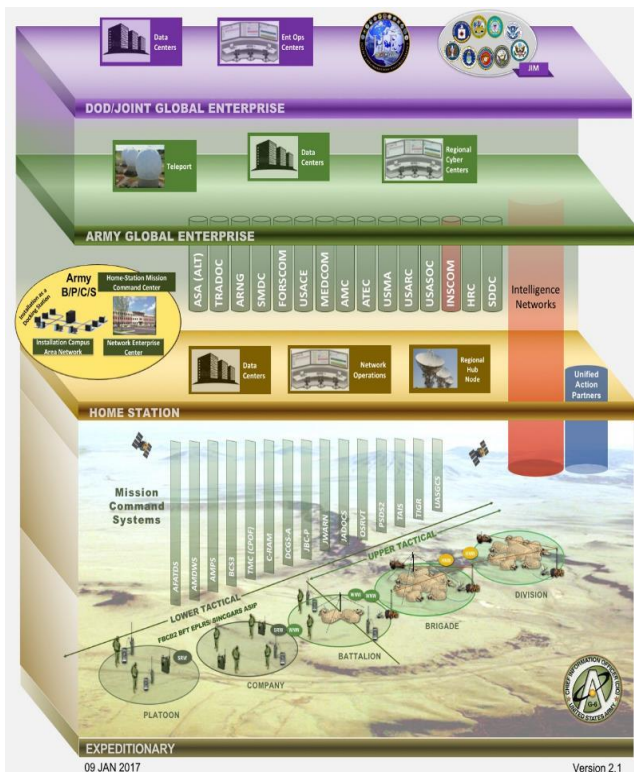

CSA's Principles, Characteristics and Requirements

<u>Principles (Why)</u>	<u>Warfighting Requirements</u>	<u>Characteristics of the Network</u>	<u>Technical Network Requirements</u>
<p><u>Mission</u>: The Army must <u>fight</u> and <u>win</u> wars against adversaries...</p> <p><u>1st Principles</u>: The Army network must <u>enable</u>:</p> <p>1. <u>Conduct of War</u>: Execution of expeditionary, world-wide, Unified Land Operations (ULO) to shape, prevent, and win as a part of Unified Action in all domains and all environments (Note 1/2/3/4)</p> <p>2. <u>Preparation for War</u>: Execution of Title 10 responsibilities to man, train, and equip the force, and to build and sustain readiness.</p> <p>Note 1: Unified Actions Partners – Consisting of Joint, Interagency, Intergovernmental, and Multi-National (JIIM) partners</p> <p>Note 2: Domains – Land, maritime, air, space, cyber</p> <p>Note 3: Environments – Permissive, non- permissive, contested, denied</p>	<ul style="list-style-type: none"><input type="checkbox"/> Able to fight, shoot, move, communicate, protect, and sustain<input type="checkbox"/> Reliably communicate anywhere, anytime, in all domains, in all environments, against any foe	<ul style="list-style-type: none"><input type="checkbox"/> <u>Simple and Intuitive</u>, single mission command suite (Single COP), installed, operated and maintained by Soldiers<input type="checkbox"/> <u>Available, Reliable</u> and <u>Resilient</u> with the ability to operate in all operational <u>environments</u> against any enemy<input type="checkbox"/> <u>Expeditionary</u> and <u>Mobile</u>, voice, data, and video on the move<input type="checkbox"/> <u>Standards-based</u>, <u>protected</u>, and <u>dynamic</u> network that is <u>upgradeable</u> over time<input type="checkbox"/> Enables the Warfighter to Observe, orient, decide, and act faster than the enemy in the conduct of ULO (Note 4)<input type="checkbox"/> Enables use of the network as a weapon system<input type="checkbox"/> Enables leaders to lead and fight their formations from anywhere they choose	<ul style="list-style-type: none"><input type="checkbox"/> Must be capable of adequate <u>secure</u> communications, provides <u>voice</u>, <u>data</u>, <u>video</u> in all environments<input type="checkbox"/> Capable of providing situational awareness down to Platoon level<input type="checkbox"/> Device works <u>anywhere</u> in the world; installed, operated and maintained by Soldiers<input type="checkbox"/> <u>Standardized</u>: Runs on a COE, common graphics, applications, and integrated data<input type="checkbox"/> Ensures <u>continuous</u> Joint <u>interoperability</u> enabling agile and adaptable operational flexibility<ul style="list-style-type: none">❖ i.e., Enables Rapid Task Organization and employment of joint capabilities<input type="checkbox"/> <u>Mitigates</u> electronic signature<input type="checkbox"/> <u>Accessible</u> to allies and coalition partners
<p>Note 4: ULO – Simultaneous offense, defense, and stability or defense support of civil authorities tasks to seize, retain, and exploit the initiative and consolidate gains to prevent conflict, shape the operational environment and win our nations wars as part of unified action</p>			

Current State

- Doesn't enable mission command
- Lacks end-to-end interoperability
- Complex and Fragile
- EMS Vulnerable
- Multiple identities
- Crypto mod challenges
- Software baselines = interoperability challenges

Network Modernization Plan

Four Lines of Effort:

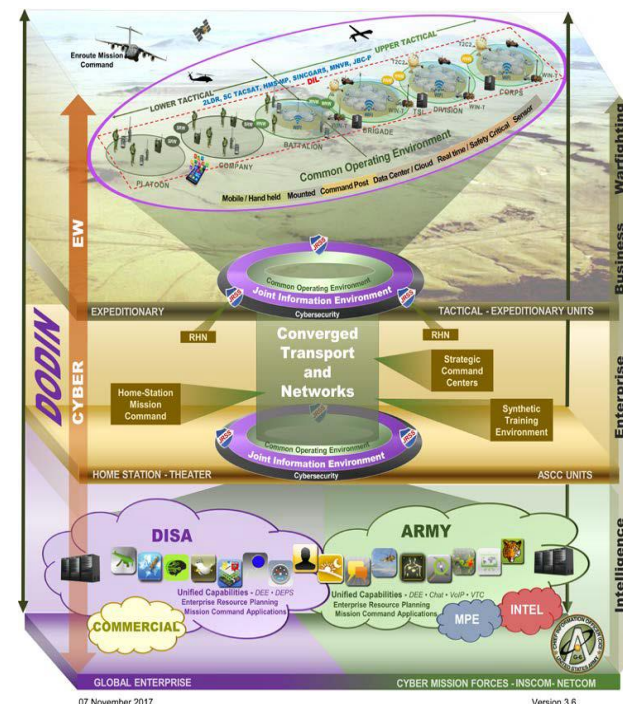

- Unified Network
- Common Operating Environment
- Interoperability
- Command Post

Supporting Efforts

- Institutional Reform
- Policies and Governance
- Research and Development
- Science and Technology

Future State

- Seamless end-to-end connection and pace plan
- Self-generating, self-healing, multilayered integrated network
- Unified Transport Layer → End User Device
- Unified Mission Command Suite
- Simple and Intuitive
- Available, Reliable and Resilient
- Expeditionary and Mobile
- Standards-based, protected, upgradeable
- OODA Faster than the enemy
- Network is a weapon system

What is the Army's Network Modernization Strategy?

Vision: An integrated/unified, end-to-end, warfighting network that is flat, fast, mobile and protected which enables leaders to lead and fight their formations from anywhere they choose

Ends: A cascading set of successive future states achieved through four lines of effort:

- Unified Network - Supporting all theater of operations
- Common Operating Environment – Unified suite of mission command applications
- Interoperability – Among all Army elements, Joint and Coalition partners
- Command Posts – Deployable, mobile and survivable

Ways: Implement the pillars of “halt”, “fix” and “pivot” across the four lines of effort. Objectives established over time allowing the Army to develop and apply the means to achieve successive future states.

Means: Reinvest the funding from the programs halted in FY18 to fix our fight tonight capability (improve readiness) and then shift to focused investments in RDT&E and proven industry, Joint and SOF solutions to pivot to the next generation network.

1. **Halt** programs that cannot be sufficiently remedied
2. **Fix** programs required to “fight tonight”
 - ☐ Command posts → Improve survivability and mobility
 - ☐ Transport → Integrate the upper and lower tactical internet into a unified transport layer; increase survivability to Electronic Warfare/Cyber threats
 - ☐ Mission Command Application Suite → Common Operating Environment
 - ☐ Interoperability → Joint and Coalition gateways and Tactical Data Links
3. **Pivot** to a new adapt and buy approach
 - ☐ Design “future state” network to address shortfalls, counter the threat, and keep pace with technology
 - ☐ Through experimentation and demonstration, adapt and buy current available Joint/SOF and industry solutions where possible
 - ☐ Develop future solutions through RDT&E and S&T; develop new Programs of Record only to meet a unique warfighter requirements

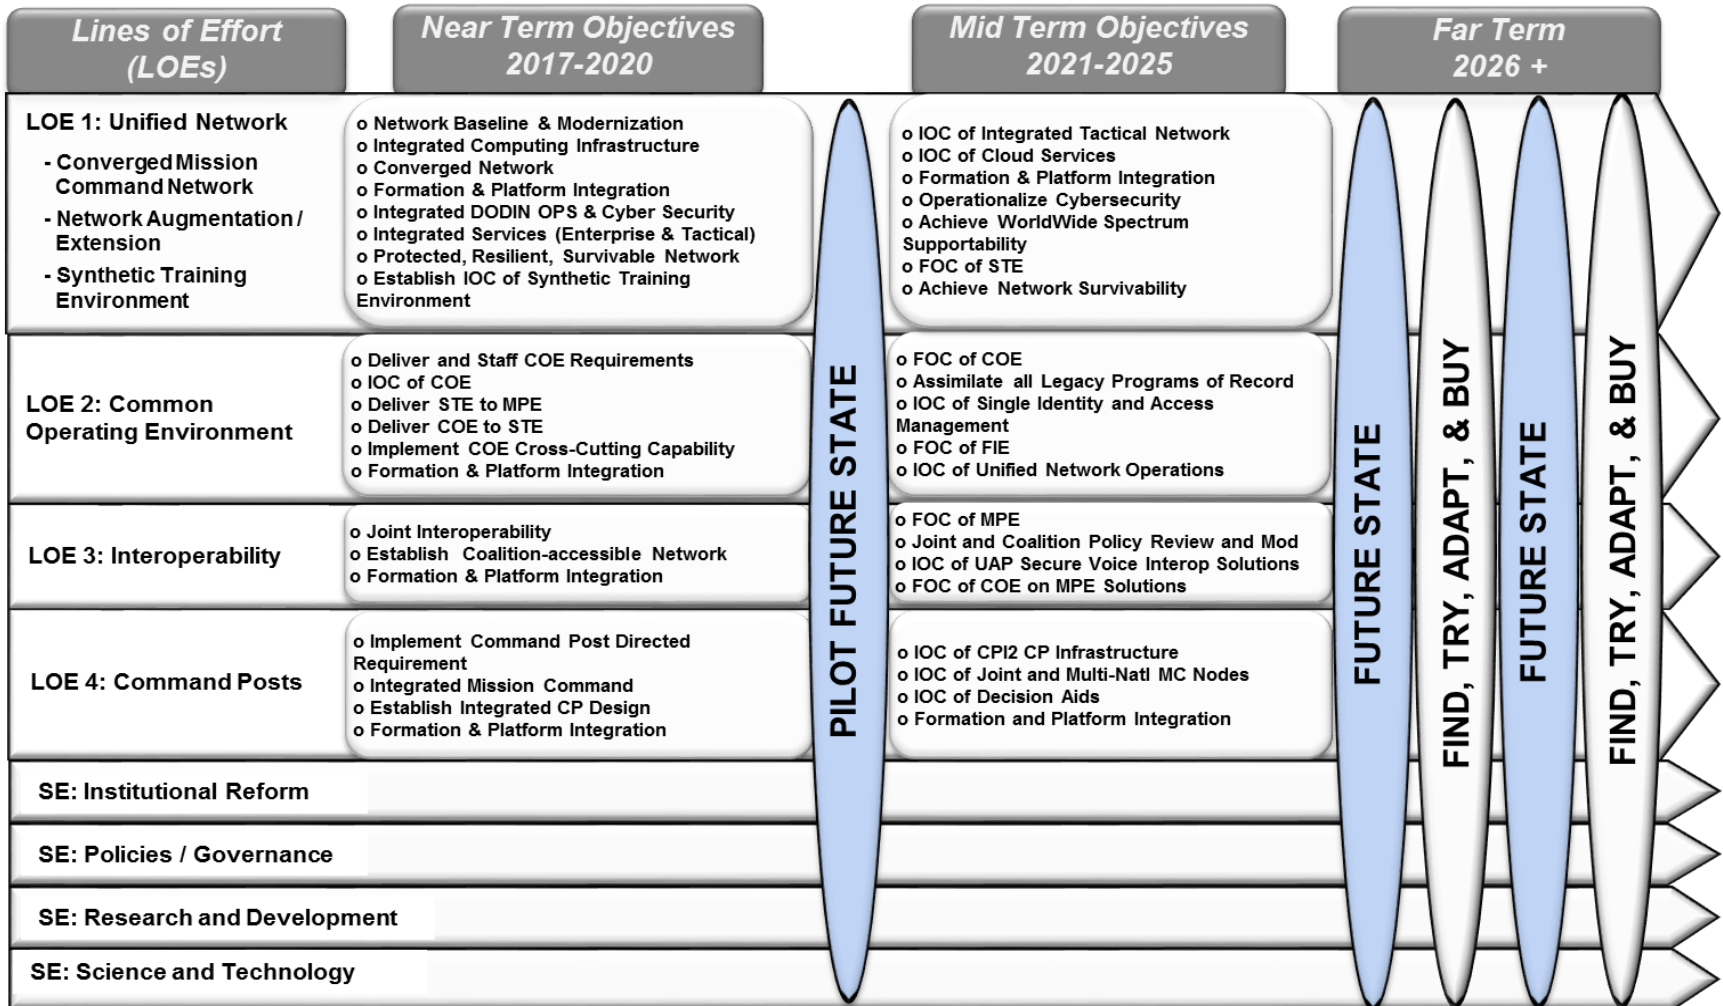

Requires significant change in current acquisition approach; unity of command, effective governance, an integrated body of requirements, and standards based architecture

Implementation Plan Framework

Three Phases: to 2020, to 2025, to 2026+

3 – 5 Year Sprints Between Future States

A cascading set of successive future states achieved through four lines of effort
