

Rob Mathieson, CISSP ECSA

Senior Analytics Specialist

Forcepoint G2CI

Rob has spent the better part of 20 years in the network and cyber security industry, with experience starting in the Marine Corps, spanning through offensive and defensive cyber operations, crossing through DoD civilian and contractor ranks, and most recently supporting the analytics products within the Forcepoint portfolio. He's supported some of the most difficult customers in some of the most difficult areas of the world, and brings each one of those lessons learned to his current customers every day.

As the section chief for defensive cyber operations at HQ USPACOM (Now USINDOPACOM), Rob fully realized the need for more adaptive defensive controls, and helped author the first in a series of dynamic cyber playbooks to be used throughout the pacific theater. That interest in rapidly shifting defensive postures eventually landed Rob at Forcepoint, where he currently supports the range of Dynamic and Risk Adaptive technologies, powered by Forcepoint Behavioral Analytics.
