

FOCUS:

CLOUD COMPUTING

The forecast for cloud computing has never been brighter. Government is turning to the commercial sector to provide this type of data storage and access in a variety of manners, including hybrid architectures. Industry is responding by offering new cloud capabilities to suit changing government needs. *SIGNAL*'s June 2018 issue looks at some of the industry offerings to government along with government's own exploration into how it uses cloud technologies.

- The U.S. Army Research Laboratory pursues blue-sky approaches to cloud computing.
- The National Science Foundation is working with three major commercial cloud providers to offer millions of dollars worth of cloud services to researchers.
- As it integrates network-centric systems, the U.S. Navy SPAWAR employs cloud computing to support agile systems.

ADDITIONAL CONTENT:

- A company presents next-generation information technology architecture to the Army in pursuit of the digital edge.
- The Marines are looking for a few good drones to carry supplies to warfighters at the front.
- The race for quantum communications is heating up, and China has burst out of the pack into the lead.
- Mobility and artificial intelligence are on a collision course for new U.S. Defense Department immersive training.
- With a renewed emphasis on high frequency communications, the U.S. Army is finding that troops aren't trained on it—and the service isn't prepared to train them.
