FOCUS:
NATO

All military organizations are depending on technology to an increasing degree, and that also applies to NATO. The Atlantic alliance is working to keep its many member states abreast of technological innovation while forestalling attacks from unfriendly nation states. SIGNAL Magazine’s April issue offers a glimpse of these multinational efforts across the Atlantic:

• The innovation director for the NATO Communications and Information Agency discusses how the alliance.
• The commander of NATO’s Cyber Defense Group explores the operational aspects of this difficult mission.

SPECIAL REPORT:
Critical Infrastructure

Homeland security has many aspects, but protecting the critical infrastructure is at the heart of all national interests. What sets it apart from other terrorist and peer-state targets is that it largely is privately owned. SIGNAL’s April issue looks at how government and industry are working together to secure the homeland’s Achilles heel.

• The assistant secretary of defense for homeland defense and global security discusses the Defense Department’s expanding role in infrastructure protection.
• Army research highlights the cybersecurity vulnerabilities of the freshwater and wastewater infrastructure.
• An veteran of critical infrastructure protection takes a look from the industry side.

VALUE-ADDED INCENTIVE:
Advertisers may submit a press release for posting on SIGNAL Online.

Gain additional exposure in SIGNAL’s April issue. Our bonus distribution includes the following event:
Foreign Naval Maritime Threat Symposium
AFCEA International • April 11, 2019 • Chantilly, VA
